THE ULTIMATE HDPE FLOATING PONTOON DOCKS

Using forward thinking, Dock Kings pontoon docks, represent the latest advances in both material and manufacturing techniques for constructing High Density Polyethylene (HDPE) Floating Pontoon Docks. We believe our dock products are the highest quality floating docks available, at the most competitive prices.

Our High Density Polyethylene (HDPE) pontoons are made from stress relieved resin to prevent fatigue, brittleness & cracking. With high tension strength, chemical and animal resistant, and not susceptible to breakdown due to UV light exposure. As well, it will not rot, corrode nor support biological growth. HDPE is structurally designed to withstand impact, especially in cold weather installations, when other floating docks are prone to cracking and breakage. Freezing the system in the ice will not damage floating docks built with our pontoons. These advanced features make it the ideal material of choice for floating docks in any environment.

All Dock Kings docks use 18" diameter with 5/8" thick solid wall pontoons, with a smooth external surfaces. This creates a lower centre of gravity & better stability in rough conditions. All our docking systems are built using our patented pending, custom made welded HDPE Support and Cross braces, used for the substructure. Hidden decking screws and 1/2" carriage bolts secures the skirt to the substructure.

HDPE Pontoons have a very high strength to weight ratio, which makes it easier to transport and install. Naturally positively buoyant, virtually unsinkable, Dock Kings unloaded pontoon floats will continue to float even when full of water.

A Dock King Floating Pontoon dock is a long-term investment that will continue to pay for itself. The Plastics Pipe Institute estimates the service life of HDPE pontoons to conservatively be 50-100 years.

DECKING SURFACE CHOICES

- Western Red Cedar
- Cedar Tone (PT)
- HDPE Plastic Wood
- Exotic Hardwoods
- Aluminium

Any dock can be custom designed and constructed to fit any of your requirements. We supply floating pontoons with or without services (electrical, water, cable, telephone), and docks for Municipalities, mining companies, complete marinas, boat dock and walkways, fish pens, work platforms, seaplane docks, aqua culture, floating rafts and more.

Experience the DOCK KINGS difference:

- Free Site visits to determine your exact requirements, therefore no guess work over the phone.
- HDPE pontoons will not corrode like steel in water.
- Patented Stringers Brackets welded to the pontoons providing extreme stability.
- Hidden Deck Screws for all decking. No viewing of deck boards or viewing screws or nails on the deck boards.
- Double Outer Skirt - Very aesthetic and hides the pontoons from view.
- Dock Kings only uses 1/2" galvanized carriage bolts.
- Individual lengths of 50' and to any width.
- All accessories available, Gangways, Strong Arms, Railings, Anchors.
- Full Turn Key Delivery installation available.
- Dock Kings will provide to you - the **BEST** system, the **BEST** price, the **BEST** customer service available.
