

Revolutionary Floating Docks and Boat Lifts

New floating docks that will change the way you get in and out of the water

Like all truly great cottage innovations, Dock Kings Ultimate Floating Pontoon Dock was created out of necessity. "We wanted an environmentally friendly, high quality, durable floating dock system that could be enjoyed with little to no maintenance, and could be left in the water year round," says owner Mathew King. "It also had to be aesthetically appealing to the eye, with no worries of low profile watercraft getting caught under the outer skirt."

"We've been in the floating drive-on lift systems and dock business for a long time, and we know what looks good and functions well in cottage country," says Mathew. "Our final design really demonstrates what we would want at our own cottage."

CANADIAN-MADE, HIGH-END, STABLE FLOATING DOCKS

Dock Kings' Ultimate Pontoon Docks design starts with HDPE (High Density Polyethylene) 18" pipe with a 1/2" wall thickness. Connecting the pontoon and substructure is Dock Kings' own patent pending HDPE brackets.

Dock Kings controls the manufacturing process from start to finish, and the quality begins with our Ontario Mennonite partners that do all of our substructure welding. "With our HDPE brackets, we are not limited to any width, and we can build any size and configuration the customer

desires," says Mathew. The fact that the whole substructure is made out of HDPE means it will not attract animals or corrode over time.

Dock Kings provide a free no obligation site visit to ensure that the customer receives the proper dock layout, and the installation requirements are met for the specific location.

"We don't believe in taking shortcuts. What we do believe in is providing only the highest quality products and service for our customers," says Mathew. These high standards are what makes our systems different—for example a 10-foot wide dock is designed with three pontoons while the 12-foot wide dock has four pontoons.

JETDOCK ULTIMATE DRIVE-ON LIFT SYSTEM

If you've ever longed to drive your watercraft up onto your boat lift and walk away, JetDock has the perfect solution. The JetDock Ultimate Drive-On Lift System is the newest revolution in the boat lift industry. Unlike conventional boat lifts, there is no more

cranking to dry dock your personal watercraft, sea-doo, jet ski, jet boat, inboard, outboard stern drive, pontoon, catamaran, seaplane, ski boat and high performance watercraft up to 50'.

"Watercrafts are kept high and dry, completely dry docked, without the use of motors, gears, straps or cables like regular boat lifts," explains brother Brad King. "Your JetDock Ultimate Drive-On Lift System is always down at

water level, never dangling your craft in the air or blocking your view," he adds.

JetDock's customer base includes residential, commercial, government, police, coast guard and military. "Not too many floating lift systems can hoist 30,000 pounds," adds Brad. "Cottagers need only provide the size of boat and we will design the right system for them."

All of our dock products are available for delivery, customer pick-up, or can be drop shipped right across Canada. "Full turnkey installation is available for all docking systems," adds Brad.

Why Choose Dock Kings' Custom Pontoon Docks

- ✓ Unparalleled customer service
- ✓ Patented pending spacing HDPE brackets for extreme stability
- ✓ All pontoons and substructure designed using HDPE, will not rust or corrode ever
- ✓ Aesthetically pleasing by using hidden deck screws, flip down cleats and double outer skirts
- ✓ Free, no obligation site visits
- ✓ Individual lengths up to 50 ft and in any widths
